This publication is an essential guide for general counsel and law firms to the changing world of human rights and its importance for global business. The book highlights the growing relationship between human rights and global business and the developing international focus on the issue, particularly as a result of recent United Nations initiatives. Providing detailed commentary from leading international law firms, this first edition focuses on the legal accountability and due diligence responsibilities of corporates based in many of the world's most developed jurisdictions for human rights compliance by their overseas operations.

This book addresses a selection of major topics in family businesses, namely 'managerialization' and 'professionalization', succession, internationalization, access to financial markets, and how governance and control systems can help family firms respond to common problems inherent in the business. Written by prominent experts, the respective chapters highlight the interactions between these topics in order to develop a systems view of the distinctive challenges, and of the potential roles that governance and control systems can play in these contexts. The book is divided into two main parts, the first of which reviews the current literature and develops a comprehensive theoretical framework. Based on these theoretical insights, the second part then interprets and discusses the empirical evidence, including case studies on family-run firms in Italy.

Government is committed to conducting formal impact assess-

ments of the need for and likely impact of new regulations. This National Audit Office report finds that scrutiny of proposed legislation is strengthening and that the standard is better than it was, but one fifth of assessments still do not include any quantified data to assess costs or benefits. The Better Regulation Executive (BRE) has introduced new guidance, templates and training to improve the quality of impact assessments and, as a result, impact assessments have clearer presentation of results, better planning for implementation, and more quantification of costs and benefits. But wide variation remains between the best and worst impact assessments. Where they are done well, the impact assessments include a clear statement of the policy problem, make good use of consultation and have clear recommendations. On the other hand, only 20 per cent of impact assessments presented the results of an evaluation of a range of regulatory options. Many im-

impact assessments did not pay enough attention to compliance and enforcement issues. For example, only one third of assessments assessed the cost of enforcement for the preferred option. There have been improvements in the analysis of costs and benefits. In 2008, 67 per cent of impact assessments quantified costs and 60 per cent quantified benefits. Under the previous arrangements, the figures were 56 per cent for quantified costs and 40 per cent for quantified benefits. There is, however, still wide variation in the level of evidence provided and insufficient analysis in the weaker impact assessments.

This book illustrates the importance of business impact analysis, which covers risk assessment, and moves towards better understanding of the business environment, industry specific compliance, legal and regulatory landscape and the need for business

continuity. The book provides charts, checklists and flow diagrams that give the roadmap to collect, collate and analyze data, and give enterprise management the entire mapping for controls that comprehensively covers all compliance that the enterprise is subject to have. The book helps professionals build a control framework tailored for an enterprise that covers best practices and relevant standards applicable to the enterprise. Presents a practical approach to assessing security, performance and business continuity needs of the enterprise. Helps readers understand common objectives for audit, compliance, internal/external audit and assurance. Demonstrates how to build a customized controls framework that fulfills common audit criteria, business resilience needs and internal monitoring for effectiveness of controls. Presents an Integrated Audit approach to fulfill all compliance requirements.
