### **B1E - ADRIEL GIDEON**

---

A two-time Pulitzer Prize winner and author of the best-selling *Ghost Wars* traces the Bin Laden family's rise to power and privilege, describes the diverse lifestyles of the generation to which Osama bin Laden belongs, and discusses their attempts to recover from the effects of September 11.

The sultanate's economy continues to enjoy the benefits of petroleum wealth, which has provided budget surpluses in most years and served as a backbone for growth. However, planning is well under way for an era in which oil will not be the main economic driver, with the twin goals of diversification and creating an increased number of private sector jobs at the top of the government's current agenda. Indeed, in recent years, the non-OPEC oil exporter's economy has been undergoing a steady transformation, reorienting from oil toward a more diverse set of service and industry-based economic activities. So far, progress has been promising. In 2011 oil and gas accounted for 38.8% of GDP. With the continuation of higher-than-expected energy prices in 2012, the government has increased economic investments accordingly. These investments, which include infrastructure, social programmes and small-business development, are aimed toward better preparing the country for its post-fossil fuel future.

This technical volume makes the case that air pollution policy in the United States can be improved through consideration of both the marginal abatement costs facing regulated sources, and the marginal damages associated with their emissions. The preferred approach is a fully efficient regulatory scheme. Recognizing that completely reforming today's regulatory program, which consists

of a mix of command-and-control policies and cap-and-trade programs, is not likely to be easy in the short run, the authors propose a prioritization scheme for regulatory reform. This scheme ranks sources according to the net marginal damage of additional emissions. Policymakers should focus reforms on those sources and pollutants with the largest differences between marginal damages and marginal costs; this will yield the greatest return on incremental investments in abatement.

Managing solid waste is one of the major challenges in urbanization. A survey conducted in all 58 municipalities of Nepal in 2012 found that the average municipal solid waste generation was 317 grams per capita per day. This translates into 1,435 tons per day or 524,000 tons per year of municipal solid waste generation in Nepal. Many of these technically and financially constrained municipalities are still practicing roadside waste pickup from open piles and open dumping, creating major health risks.

This book presents the proceedings of CRIOCM2018, 23rd International Symposium on Advancement of Construction Management and Real Estate, sharing the latest developments in real estate and construction management around the globe. The conference was organized by the Chinese Research Institute of Construction Management (CRIOCM) working in close collaboration with Guizhou Institute of Technology (GIT). Written by international academics and professionals, the proceedings discuss the latest achievements, research findings and advances in frontier disciplines in the field of construction management and real estate. Covering a wide range of topics, including New-type urbanization, land development and land use, urban planning and infrastruc-

ture construction, housing market and housing policy, real estate finance and investment, new theories and practices on construction project management, smart city, BIM technologies and applications, construction management in big data era, green architecture and eco-city, rural rejuvenation and eco-civilization, other topics related to construction management and real estate, the discussions provide valuable insights into the advancement of construction management and real estate in the new era. The book is an outstanding reference resource for academics and professionals alike.

Defines and explains terms related to management, banking, finance, insurance, real estate, investment, data processing, marketing, and economic theory.

A current subject-guide to articles in British technical journals.

Since the dawn of the industrial revolution, and the ushering in of an era of global economic relations, the United States and Europe have been the core poles of economic power. However, China along with India are increasingly challenging the traditional economic hegemony. An issue of great importance is how this shift in the global economic balance of power will affect developing economies and the transition economies of the Greater Mekong Subregion (GMS), which are located in China's backyard and deeply integrated into its economy through regional supply chains. This volume examines the relationship between transition economies and the rise of China through presenting empirical case studies from the GMS. In doing so, it offers insights into the effect of China on developing countries in general, and offers practical policy directions for the place-specific economies of the GMS.
