#### Mining in Cornwall and Devon - Wikipedia

The New Mexico Mines Database provides detailed information in specific fields on the mineralogy, host rock lithology, and metal association of each mine or mining district. The database also includes limited geochemical data of both solid (host rock, ore, mine wastes, tailings, stream sediments, etc.) and water (surface, ground, pit lakes, etc.) samples.

Mining in Cornwall and Devon, in the southwest of England, began in the early Bronze Age, around 2150 BC, and ended (at least temporarily) with the closure of South Crofty tin mine in Cornwall in 1998. Tin, and later copper, were the most commonly extracted metals. Some tin mining continued long after the mining of other metals had become unprofitable.

Southern Illinois became known for producing some of the world's finest fluorite specimens after the Minerva Mine was sunk in 1942, reaching a depth of 680 feet deep. In 1979 one of the biggest specimen producers, the Denton Mine, began operations, and in 1984 another great source, the Annabelle Lee Mine, opened, eventually reaching a depth of nearly 1,000 feet.
