Introduction To Environmental Biology

Introduction to Environmental Science Powerpoint Lecture

This course introduces the student to the fundamentals of environmental biology: the structure and biota of several aquatic and terrestrial ecosystems, including Vermont ecosystems. It includes spatial and temporal changes in ecosystems and species; critical observation and interpretation of landscapes; and communication skills, critical thinking, and teamwork.

This open textbook for Introduction to Environmental Science was created under a Round Two ALG Textbook Transformation Grant. Accessible files with optical character recognition (OCR) and auto-tagging provided by the Center for Inclusive Design and Innovation.

Environmental Biology (BIO105) Environmental issues are now part of every career path and employment area. Gaining an understanding of these issues is as important as reading and math skills to employers. Most non-biology majors dread taking their science, often leaving it to the last semester of their degree.

Introduction to Biology | Basic Biology

This Powerpoint presentation is designed for the first meeting of a survey-level Introduction to Environmental Science course. The lecture briefly covers many of the fundamental ideas and issues behind the discipline and serves as a good preview for the material covered in the rest of the course.
