2F8 - HILLARY WESTON

"The Leader's Bookshelf" identifies the "Top 50" books that can help anyone become a better leader. The works selected were based on hundreds of interviews with the most senior active and retired four-star U.S. military leaders who identified books from which they gained the special insights which helped propel them to success in the most demanding leadership challenges. Each of those fifty works -- novels, memoirs, biographies, autobiographies, leadership works -- are concisely summarized and the key leadership lessons extracted and presented. Admiral Jim Stavridis and his co-author, R. Manning Ancell, have been surveying very senior military leaders for the past several years regarding their reading habits and favorite books. They have spoken to over 200 four-star officers, including those both currently on active duty and retired. Each of those admirals and generals was asked for a list of books that strongly influenced their leadership skills. Stavridis and Ancell then collated the data and analyzed which books were mentioned most frequently and which ones were most compelling in the leadership lessons offered the reader. The survey, while not scientific, was quite comprehensive. From it, Stavridis and Ancell built a powerful set of recommended readings. Whether individuals work their way through the entire top 50 list and read each book cover to cover, or read the summaries provided in "The Leader's Bookshelf" to determine which appeal to them most -- this book will provide a roadmap to better leadership. "The Leader's Bookshelf" highlights the value of reading for leaders in a philosophical and practical sense, provides advice on how to build an extensive library, lists other books worth reading to improve leadership skills, and analyzes how leaders use what they read to achieve their goals. "The Leader's Bookshelf" is a book for anyone who wants to improve their ability to lead -- whether in their family life, their professional endeavors, or within our society and civic organizations.

Sexual Minorities and Politics is the first textbook to provide students with an up-to-date, thorough, and comprehensive overview of the historical, political, and legal status of sexual and gender minorities. The text provides lists of key terms and discussion questions in each chapter to aid in student comprehension and fuel classroom debate.

One Nation, Under Drones is an interesting and informative review of how robotic and unmanned systems are impacting every aspect of American life, from how we fight our wars to how we play to how we grow our food. Edited by John Jackson, this highly readable book features chapters from a dozen experts, researchers, and operators of the sophisticated systems that have become ubiquitous across the nation and around the world. Press reports have focused primarily on unmanned aerial vehicles, officially designated as UAVs, but more often referred to as "drones." This work takes you behind the scenes and describes how Predators, Reapers, Scan Eagles, and dozens of other pilotless aircraft have been used to fight the Global War on Terrorism. Although these systems seemed to emerge fully-developed into the skies above America's distant battlefields following the attacks of September 11, 2001, readers will discover that they actually trace their lineage to World War I, when the "automatic airplane/aerial torpedo," designed and built by the Sperry Gyroscope Company, made its first flight just over a century ago. Unmanned aircraft were used by various combatants in World War II and took many forms: from converted manned bombers to intercontinental attacks on the American homeland by rice-paper balloons. Technology developed in the latter decades of the twentieth century enabled crews stationed thousands of miles away to attack targets on remote battlefields. Such long-range and remote-controlled weapons have been extensively used but are controversial from both legal and ethical standpoints. Chapters written by international law specialists and drone pilots with advanced education in ethics address these issues from both sides of the argument. The book also details how robotic systems are being used on land, in and below the seas, and in civilian applications such as driverless cars. Three dozen photographs display drones as small as an insect up to those as large as a 737 airliner. One Nation, Under Drones covers such a wide array of topics that it will be of interest to everyone from the casual reader seeking to know more about these systems to national security professionals, both in and out of uniform, who will be making decisions about their procurement and use in decades to come.

Discover the secret history of America's submarine warfare in this fast-paced and deeply researched chronicle of adventure and intrigue during the Cold War that reads like a spy thriller. *Blind Man's Bluff* is an exciting, epic story of adventure, ingenuity, courage, and disaster beneath the sea. This New York Times best-seller reveals previously unknown dramas, such as: The mission to send submarines wired with self-destruct charges into the heart of Soviet seas to tap crucial underwater telephone cables. How the Navy's own negligence may have been responsible for the loss of the USS Scorpion, a submarine that disappeared, all hands lost, in 1968. The bitter war between the CIA and the Navy and how it threatened to sabotage one of America's most important undersea missions. The audacious attempt to steal a Soviet submarine with the help of eccentric billionaire Howard Hughes, and how it was doomed from the start. A magnificent achievement in investigative reporting, *Blind Man's Bluff* reads like a spy thriller, but with one important difference--everything in it is true.

"A Military Guide to Terrorism in the Twenty-First Century" is a reference guide prepared under the direction of the U.S. Army Training and Doctrine Command (TRADOC), TRADOC G2 as a capstone reference guide on terrorism. TRADOC G2 Handbook No. 1, A Military Guide to Terrorism in the Twenty-First Century is prepared by the TRADOC Intelligence Support Activity (TRISA)-Threats. Understanding terrorism spans foreign and domestic threats of nation-states, rogue states with international or transnational agents, and other actors with specific strategies, tactics, and targets. This terrorism guide addresses foreign and domestic threats against the United States of America in a contemporary operational environment (COE). This informational handbook supports institutional training, professional military education, and operational missions for U.S. military forces in the War on Terrorism (WOT). This document provides an introduction to the nature of terrorism and recognition of terrorist threats to U.S. military forces. A common situational awareness by U.S. military forces considers three principal venues for armed forces: forces that are deployed, forces that are in transit to or from an operational mission, and forces that are primarily installation or institution support. Compiled from open source materials, this handbook promotes a "Threats" perspective and enemy situational awareness of U.S. strategies and operations in combating terrorism. Neither a counterterrorism directive nor antiterrorism manual, this handbook complements but does not replace Army training and intelligence products on terrorism.

The book examines the evolution of American naval thinking in the post-Cold War era. It recounts the development of the U.S. Navy's key strategic documents from the fall of the Berlin Wall in 1989 to the release in 2007 of the U.S. Navy's maritime strategy, *A Cooperative Strategy for 21st Century Seapower*. An insightful and penetrating intellectual history, it critically analyzes the Navy's way of thinking and ideas, and recounts how they interacted with those that govern U.S. strategy to shape the course of U.S. naval strategy in the post-Cold War era. The book explains how the Navy arrived at its current strategic outlook and why it took nearly two decades for the Navy to develop a maritime strategy in an era in which the relative saliency of such should have been more apparent to Navy leaders. The author, a Navy captain, doesn't shy from taking to task the institution and its leaders for their narrow worldview and failure to understand the virtues and contributions of American sea power, particularly in an era of globalization. It describes the reasons behind the Navy's late development of a maritime strategy during the post-Cold War era. It recounts the origins and evolution of the Navy's distinctive way of thinking and ideas about sea power since before the Second World War, particularly how they shaped and were shaped by the Navy's Cold War experiences. It argues that the Navy's way of thinking and ideas, and how they interacted those that governed U.S. strategy, bounded and channeled U.S. naval strategy away from a maritime approach as they had during the Cold War. It took an implausible series of events for one to emerge, including a losing war in Iraq—that called into question long-standing assumptions about U.S. strategy, threatened the Navy's relevance, and brought about a systemically oriented U.S. strategic approach—and the appearance of two maritime-minded Navy lead-

ers. It focuses on the process by which the Navy developed its strategic documents, the process where institutional ideas are assembled, negotiated, and reshaped in light of other influences—i.e., the direction of U.S. strategy, budgetary constraints, perceived threats, and the competing interests of other domestic and institutional actors—because even though the subject is American naval thinking (and here it must be emphasized that the concept itself is somewhat metaphorical as only people can think), that is how real strategy is made.

Despite demonstrated prowess in the handling of ships and sailors, five years after receiving his commission, Jim Stavridis was planning on getting out of the Navy and going to law school. His assignments officer, a young lieutenant commander by the name of Mike Mullen (who would go on to become Chairman of the Joint Chiefs) noticed something special in Stavridis, however, and convinced him to stay on active duty by dangling the prospect of Uncle Sam sending him to graduate school. Going ashore for a few years, Stavridis earned his MALD and PhD in international relations from the Fletcher School of Law and Diplomacy at Tufts University. The experience that taught him to look beyond the horizon and to think and act globally. Throughout his career Stavridis was anything but uniform in the way he approached his duties. An avid reader and prolific author he wrote more than 55 articles, commentaries, and book reviews in the Navy's professional journal "Proceedings" beginning when he was still a midshipman and continuing to this day. He has also written for some of the leading papers and journals in the United States, including the *New York Times*, *Washington Post*, *Atlantic Magazine*, *Naval War College Review*, and many others His career was marked by unusually challenging assignments including command of a U.S. Navy guided missile destroyer in the early '90s; two stints as a top aide to two different Secretaries of the Navy (one a Republican and the other a Democrat); and command of an aircraft carrier battle group. Stavridis narrowly missed being killed on September 11, 2001 when an American Airlines aircraft plunged into the Pentagon not far from his office. He was subsequently put in charge of a Navy think tank, "Deep Blue," which was tasked with reimagining the service's role in a post-9/11 environment. Already selected for his first star as 9/11 unfolded, his rise through the ranks was swift -- even going directly from one-star to three-star admiral without ever wearing two stars -- when he was selected to be the senior military assistant to the very demanding Secretary of Defense, Donald Rumsfeld. Surviving that crucible, he was nominated for his fourth star at the age of 50, one of the youngest persons to serve at that rank in modern history. He then became the first naval officer to lead the U.S. Southern Command -- responsible for all U.S. military operations in the Caribbean and Central and South America. At the end of that assignment he was picked to be the first naval officer to serve as Supreme Allied Commander of NATO -- a job first held by Dwight D. Eisenhower and then by a string of prominent generals. When he was given that assignment, the *New York Times* referred to Stavridis as a "renaissance Admiral," something Stavridis turned into "the accidental Admiral" given he was the first sailor to head to that command. That is where this book, "The Accidental Admiral" picks up -- as Stavridis enlightens readers about securing such a position and serving as NATO's top man in uniform for four years. They were challenging years indeed. Stavridis was responsible for NATO operations in Afghanistan, its conduct of a military intervention in Libya and preparation for possible war in Syria -- as well as worrying about the Balkans, cyber threats, piracy, all while cutting NATO by 30% due to budget reductions by the 28 nations of the Alliance. More than just describing the history of what happened, Stavridis shares with reader the "why" and gives insights into the personalities of those with whom he dealt, ranging from President Barack Obama; Secretary of State Hillary Clinton; Secretaries of Defense Robert Gates, Leon Panetta, and Chuck Hagel; Afghan President Hamid Karzai; Generals David Petraeus, Stanley McChrystal, John Allen and many more. The Accidental Admiral is more than just a memoir. The book is also a very personal reflection of the burdens and benefits of leadership, and Stavridis also shares his insights on strategic communications, planning, and the convergence of threats that will confront the U.S. and its allies in the near future. This volume examines crimes that violate environmental regulations, as part of an emerging area of criminology known as green criminology. The contributions to this book examine criminal jus-

tice concerns related to regulating and enforcing environmental laws, as well as the consequences for families and communities impacted by hazardous waste and pollution. It also describes possible strategies for deterring and preventing organized crime related to environmental regulations, including black market sales of ozone depleting substances. This innovative volume provides a criminological framework for understanding environmental harms. Examining cases from the US, Europe and Australia, this volume compares and contrasts international approaches for regulating hazardous substances, and enforcing those regulations. This work will be of interest to researchers in criminology and criminal justice, particularly interested in green criminology or environmental law, as well as researchers in environmental sciences, white collar and corporate crime, and policymakers.

Course Overview On February 28, 2003, President Bush issued Homeland Security Presidential Directive-5. HSPD-5 directed the Secretary of Homeland Security to develop and administer a National Incident Management System (NIMS). NIMS provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. You can also find information about NIMS at <http://www.fema.gov/nims/> This course introduces NIMS and takes approximately three hours to complete. It explains the purpose, principles, key components and benefits of NIMS. The course also contains "Planning Activity" screens giving you an opportunity to complete some planning tasks during this course. The planning activity screens are printable so that you can use them after you complete the course. What will I be able to do when I finish this course? * Describe the key concepts and principles underlying NIMS. * Identify the benefits of using ICS as the national incident management model. * Describe when it is appropriate to institute an Area Command. * Describe when it is appropriate to institute a Multiagency Coordination System. * Describe the benefits of using a Joint Information System (JIS) for public information. * Identify the ways in which NIMS affects preparedness. * Describe how NIMS affects how resources are managed. * Describe the advantages of common communication and information management systems. * Explain how NIMS influences technology and technology systems. * Describe the purpose of the NIMS Integration Center CEUs: 0.3

FULL COLOR reprint of 1998 study from the United States Naval Historical Center. This volume describes in detail the U.S. Navy's role in Operations Desert Shield and Desert Storm, one of the most successful campaigns in American military history. The work describes the contribution to victory of Navy men and women who served afloat in the carrier-based fighter and attack squadrons, the surface warships, amphibious and mine countermeasures vessels, submarines, and logistic and hospital ships. It also relates the activities of American sailors ashore or close inshore who protected the vital harbors of northern Saudi Arabia, provided Marine combat units with medical and construction assistance, flew vital supplies to forward areas, or coordinated all this activity on Navy and joint staffs. Overall, it is a story of Navy men and women, regular and reserve, who unselfishly answered their nation's call to arms when aggression threatened peace in the Persian Gulf.

Assigned to the combat intelligence unit in Honolulu from June 1941 until the end of World War II, author W. J. Holmes was an important part of the naval organization that collected, analyzed, and disseminated intelligence information, and his compassionate understanding of the business of intelligence gathering is unique. Here, he not only captures the mood of the period but also gives rare insight into the problems and personalities involved. The reader comes to fully appreciate the painful moral dilemma faced daily by commanders in the Pacific once the Japanese naval codes were broken. Every time the Americans made use of the enemy messages they had decoded, they increased the probability that the Japanese would realize what had happened and change their codes, thereby causing the U.S. Pacific Fleet to lose a vital edge. Withholding the information, however, could - and sometimes did - result in the loss of American lives and ships. This illuminating study reveals not only the difficulties of collecting intelligence, but of deciding when to use it.

The decade that followed James Stockdale's seven and a half years in a North Vietnamese prison saw his life take a number of different turns, from a stay in a navy hospital in San Diego to president of a civilian college to his appointment as a senior research fellow at the Hoover Institution. In this collection of essays he offers his thoughts on his imprisonment. Describing the horrors of his treatment as a prisoner of war, Stockdale tells how he discovered firsthand the capabilities and limitations of the human spirit in such a situation. As the senior officer in confinement he had what he humbly describes as "the easiest leadership job in the world: to maintain the organization, resistance, and spirit of ten of the finest men I have ever known." His reflections on his wartime prison experience and the reasons for his survival form the basis of the writings reprinted here. In subject matter ranging from methods of communication in prison to military ethics to the principles of leadership, the thirty-four selections contained in this volume are a unique record of what Stockdale calls a "melting ex-

perience"—a pressure-packed existence that forces one to grow. Retired Vice Admiral James B. Stockdale, a Hoover Institution fellow from 1981 to 1996, was Ross Perot's 1992 presidential running mate and a recipient of the Medal of Honor after enduring seven and a half years as a prisoner of war in North Vietnam. He died in 2005 at the age of 81.

Draws on interviews with veterans and new primary sources to present a narrative account of the pivotal World War II campaign, chronicling the three-month effort to gain control of Guadalcanal as a battle that taught the U.S. Navy and Marines new approaches to warfare.

Here is the extraordinary story of the most consequential campaign of the Pacific War- the U.S. Fifth Fleet's seizure of the Marianas, a relentless deployment of overwhelming force on air, land, and sea that opened the path to total victory over Japan and established a new state of the art in warfare- the first use of the forerunners of today's SEALs; the emergence of massive cross-hemispheric expeditionary operations; the flowering of American naval aviation and carrier power; and the secret training of Marianas-based air crews who would first unleash nuclear fire. From the epic seaborne invasion of Saipan, to the stunning aerial battles of the Marianas Turkey Shoot, to the grinding combat ashore and the devastating bombing campaign that culminated with Hiroshima and Nagasaki, the Marianas were the fulcrum of the Pacific, a kaleidoscope of valor, drama, and tragedy. Story Locale- The Marianas, Central Pacific, 1944.

The bestselling primer on the social, political, and economic challenges facing Central and South America by The Economist editor and author of Brazil. Latin America has often been condemned to failure. Neither poor enough to evoke Africa's moral crusade, nor as explosively booming as India and China, it has largely been overlooked by the West. Yet this vast continent, home to half a billion people, the world's largest reserves of arable land, and 8.5 percent of global oil, is busily transforming its political and economic landscape. This book argues that rather than failing the test, Latin America's efforts to build fairer and more prosperous societies make it one of the world's most vigorous laboratories for capitalist democracy. In many countries—including Brazil, Chile and Mexico—democratic leaders are laying the foundations for faster economic growth and more inclusive politics, as well as tackling deep-rooted problems of poverty, inequality, and social injustice. They face a new challenge from Hugo Chávez's oil-fueled populism, and much is at stake. Failure will increase the flow of drugs and illegal immigrants to the United States and Europe, jeopardize stability in a region rich in oil and other strategic commodities, and threaten some of the world's most majestic natural environments. Drawing on Michael Reid's many years of reporting from inside Latin America's cities, presidential palaces, and shantytowns, the book provides a vivid, immediate, and informed account of a dynamic continent and its struggle to compete in a globalized world. "No one who seriously aspires to discuss Latin American politics, economics, and culture should go without reading *Forgotten Continent*."—National Interest

The terrifying new role of technology in a world at war Master-at-Arms (MA) provide waterborne and land security, aircraft and flight line security, strategic weapons and cargo security, maritime security and platform protection; conduct customs operations, corrections operations, detainee operations, and protective service operations; perform anti-terrorism, force protection, physical security and law enforcement; organize and train personnel in antiterrorism, force protection, physical security, law enforcement, and weapons proficiency; develop plans for physical security and force protection enhancement of Navy bases, installations, property, and personnel; and assist commands in conducting terrorist threat analysis and implementing defensive measures.

This manual provides guidance for the organization, planning, and conduct of the full range of military operations on urbanized terrain. This publication was prepared primarily for commanders, staffs, and subordinate leaders down to the squad and fire team level. It is written from a Marine air-ground task force perspective, with emphasis on the ground combat element as the most likely supported element in that environment. It provides the level of detailed information that supports the complexities of planning, preparing for, and executing small-unit combat operations on urbanized terrain. It also provides historical and environmental information that supports planning and training for combat in built-up areas

Two high-achieving African Americans in the U.S. Navy share their leadership experiences over nearly sixty consecutive years of service. Melvin G. Williams Sr. served in the Navy from 1951 to 1978 with a final assignment as a Command Master Chief. His son, Melvin G. Williams Jr., served from 1978 to 2010 with a final assignment as Commander, U.S. Second Fleet. Their book describes how they navigated through the ranks by employing what they call the "Seven Cs" of leadership and how those leadership principles can be learned, practiced, and refined for any profession.

The Psychology of Criminal and Antisocial Behavior: Victim and Offenders Perspectives is not just another formulaic book on forensic psychology. Rather, it opens up new areas of enquiry to busy practitioners and academics alike, exploring topics using a practical approach to social deviance that is underpinned by frontier research findings, policy, and international trends. From the relationship between psychopathology and crime, and the characteristics of catathymia, compulsive homicide, sadistic violence, and homicide victimology, to adult sexual grooming, domestic violence, and honor killings, experts in the field provide insight into the areas of homicide, violent crime, and sexual predation. In all, more than 20 internationally recognized experts in their fields explore these and other topic, also including discussing youth offending, love scams, the psychology of hate, public threat assessment, querulence, stalking, arson, and cults. This edited work is an essential reference for academics and practitioners working in any capacity that intersects with offenders and victims of crime, public policy, and roles involving the assessment, mitigation, and investigation of criminal and antisocial behavior. It is particularly ideal for those working in criminology, psychology, law and law enforcement, public policy, and for social science students seeking to explore the nature and character of criminal social deviance. Includes twenty chapters across a diverse range of criminal and antisocial subject areas Authored by an international panel of experts in their respective fields that provide a multi-cultural perspective on the issues of crime and antisocial behavior Explores topics from both victim and offender perspectives Includes chapters covering research, practice, policy, mitigation, and prevention Provides an easy to read and consistent framework, making the text user-friendly as a ready-reference desktop guide

Ship Salvage, Harbor Clearance and Wreck Removal oftentimes require extensive underwater cutting and welding. The lack of recent fleet experience in these areas dictates the need for a manual that incorporates state of the art equipment and tried and proven underwater cutting and welding techniques. The knowledge contained in this manual is a collection of fleet and commercial experience. It has been reviewed by technical experts with extensive salvage and underwater cutting and welding experience. This revision of the Underwater Cutting and Welding Manual has been prepared to provide the most current information on equipment and procedures available. All of the equipment covered may not be found on the Diving Equipment Authorized for Navy Use (ANU) list (NAVSEAINST 10560.2), but is included in this manual as an aid to the salvor who finds himself in a "must get the job done" situation. Further guidance can be found in Appendix E. Due to limited time allocation, there is a lack of realistic underwater cutting and welding training in the Navy's diving schools. Students are given only the basics in school and thereafter must practice to become proficient and gain the experience necessary to become "qualified underwater cutters and welders." I therefore charge all diving officers, master divers and diving supervisors to establish or maintain existing training programs for underwater cutting and welding. Practice, practice, practice.
