## 316 - JOSEPH WALSH

---

ASCCP released new guidance (April 2020) to inform assessment and treatment of abnormal cervical cancer screening results. The overarching theme reflects a 'risk-based' strategy, rather than rigid focus on a particular result. Those aged 25 to 65 should have a primary HPV test\* every 5 years. If primary HPV testing is not available, screening may be done with either a co-test that combines an HPV test with a Papanicolaou (Pap) test every 5 years or a Pap test alone every 3 years. (\*A primary HPV test is an HPV test that is done by itself for screening.

While guidelines from the task force, the body that insurers tend to follow when deciding which procedures they are likely to cover, don't rule out continuing to get a Pap smear if you're between 30 and 65, it's now one of three options.

### **What are the New CDC Guidelines Around Pap Smears - Nurx**

The new ACS guidelines argue that the

HPV test should be the "preferred method of testing" as the United States is in a "transition period" away from the "former mainstay" of Pap smears. The HPV...

### **The American Cancer Society Guidelines for the Prevention ...**

Screening Guidelines. The American Cancer Society (ACS), ASCCP, and the American Society for Clinical Pathology (ASCP) have released guidelines for the prevention and early detection of cervical cancer. The guidelines generally advise a reduction in the number of tests women get over their lifetime to better ensure that they receive the benefits of testing while minimizing the harms, and include a preference for co-testing using the Pap test and HPV test for women age ages 30 to 65.

The guidelines, in short: Women ages 21-29 should get a Pap smear every three years Women ages 30-65 can get an HPV test every five years, or a Pap test every three years, or a combination every...

Rather than consider screening test results in isolation, the new guidelines use

current and past results, and other factors, to create individualized assessments of a patient's immediate risk of precancer (CIN3+), or 5-year risk of progressing to precancer or cancer.

In 2018, the CDC announced new guidelines for Pap smear and HPV testing. As per the new guidelines: Women within the age group of 30-65 years are urged to get a Pap smear every three years, HPV testing every five years, or a combination of these two tests every five years.

### **Recommendation: Cervical Cancer: Screening | United States ...**

a new recommendation that people aged 70 years and older who were unscreened or under-screened prior to age 70 have two consecutive normal cytology samples (taken 12 months apart) before ceasing cytology screening.

The U.S. Preventative Task Force and the American College of Obstetricians and Gynecologists (ACOG) recommendations currently differ from the ACS guidelines. They encourage Pap tests every three...

The 2018 USPSTF guideline included HPV testing alone, cotesting, and Pap testing as equal options. The difference in the new ACS guidelines is that they elevate HPV testing alone over the other two tests. Why does the new guideline recommend screening starting at age 25, instead of age 21?

### **Pap smear - Mayo Clinic Cervical cancer: HPV test better than Pap, per American ...**

You should start getting Pap tests at age 21. If your Pap test result is normal, your doctor may tell you that you can wait three years until your next Pap test. If You Are 30 to 65 Years Old. Talk to your doctor about which testing option is right for you— A Pap test only.

Women aged 21 to 65 years. The USP-

STF recommends screening for cervical cancer every 3 years with cervical cytology alone in women aged 21 to 29 years. For women aged 30 to 65 years, the USPSTF recommends screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (cotesting).
