Surviving the Future is a story drawn from the fertile ground of the late David Fleming's extraordinary *Lean Logic: A Dictionary for the Future and How to Survive It*. That hardback consists of four hundred and four interlinked dictionary entries, inviting readers to choose their own path through its radical vision. Recognizing that *Lean Logic's* sheer size and unusual structure can be daunting, Fleming's long-time collaborator Shaun Chamberlin has selected and edited one of these potential narratives to create *Surviving the Future*. The content, rare insights, and uniquely enjoyable writing style remain Fleming's, but are presented here at a more accessible paperback-length and in conventional read-it-front-to-back format. The subtitle—*Culture, Carnival and Capital in the Aftermath of the Market Economy*—hints at Fleming's vision. He believed that the market economy will not survive its inherent flaws beyond the early decades of this century, and that its failure will bring great challenges, but he did not dwell on this: "We know what we need to do. We need to build the sequel, to draw on inspiration which has lain dormant, like the seed beneath the snow." *Surviving the Future* lays out a compelling and powerfully different new economics for a post-growth world. One that relies not on taut competitiveness and eternally increasing productivity—"putting the grim into reality"—but on the play, humor, conversation, and reciprocal obligations of a rich culture. Building on a remarkable breadth of intellectual and cultural heritage—from Keynes to Kumar, Homer to Huxley, Mumford to MacIntyre, Scruton to Shiva, Shakespeare to Schumacher—Fleming describes a world in which, as he says, "there will be time for music." This is the world that many of us want to live in, yet we are told it is idealistic and unrealistic. With an evident mastery of both economic theory and historical precedent, Fleming shows that it is not only desirable, but actually the only system with a realistic claim to longevity. With friendliness, humor, and charm, *Surviving the Future* plucks this vision out of our daydreams and shows us how to make it real.

All living things, be it humans, animals or plants were born to survive - or at least fight to survive. Even though it is engraved into our very DNA, there are times when it is more of a task than it is of an innate thing. There are times when the weak perish, and the strong emerge to thrive even more in the new environment. With human beings depending on tools for survival, knowing what to pack in case of a calamity and the simple tricks to employ could be the difference between death and life.

In the US medical environment where medical mistakes, over-diagnosis, and over-treatment have become the third leading cause of death, leadership consultant and long-time charity CEO Edward Morgan argues that protecting yourself with medical wisdom can add 10-15 years to your life. We're a nation on meds, where 60% of adults are now diagnosed with some chronic condition. We're listening to unwise advice and becoming permanent patients. Longevity is declining in America, even though medical costs in the US are twice that of other developed nations. Don't get caught in medical misadventures that escalate into permanent conditions, screenings that cascade into fear-driven decisions, prescriptions that simply suppress symptoms, or worst of all, end up dying in an ICU in the vain hope for a few more days. Smart is not the same as wise. Medical wisdom and discernment will extend your life. Taking today's aggressive, profit-driven advice will quite possibly shorten it. Living to see your grandchildren grow up is your responsibility, not your doctor's. This is a must read for anyone already feeling like a patient for life. With courage and wisdom you can become a well person again and live out your full lifespan.
