With *A Death in Wichita* (originally published as *The Wichita Divide*) New York Times bestselling author Stephen Singular offers an in-depth account of the life and death of a controversial doctor, the debate that sparked his assassination, and the place where two Americas collide On May 31, 2009, Scott Roeder walked into a Wichita church, drew a pistol, and shot Dr. George Tiller at point blank range. Tiller, who was the most public practitioner of late-term abortions in America, had been a lightning rod for controversy, regularly referred to in the conservative media as "Tiller, the Baby Killer." Tiller's death was a pivotal, public murder in a war that has been raging for decades. It's a war of violently opposing ideologies, encompassing abortion, but also questions of privacy, sexuality, and religion. It's being fought in our nation's courtrooms, school and churches, on television sets, at our dinner tables, and in our bedrooms. And more and more, the key battlegrounds are in Kansas, once home to Brown vs. Board of Education and some of the bloodiest conflicts of the Civil War. *A Death in Wichita* is a gripping look at a cold-blooded terrorist action, two men representing opposite ideological extremes, and the region where those violent forces clash. "A disturbing, haunting journey into unrepentant hatred." - Kirkus Reviews

Until recently B-spline curves and surfaces (NURBS) were principally of interest to the computer aided design community, where they have become the standard for curve and surface description. Today we are seeing expanded use of NURBS in modeling objects for the visual arts, including the film and entertainment industries, art, and sculpture. NURBS are now also being used for modeling scenes for virtual reality applications. These applications are expected to increase. Consequently, it is quite appropriate for *The NURBS Book* to be part of the *Monographs in Visual Communication Series*. B-spline curves and surfaces have been an enduring element throughout my professional life. The first edition of *Mathematical Elements for Computer Graphics*, published in 1972, was the first computer aided design/interactive computer graphics textbook to contain material on B-splines. That material was obtained through the good graces of Bill Gordon and Louie Knapp while they were at Syracuse University. A paper of mine, presented during the Summer of 1977 at a Society of Naval Architects and Marine Engineers meeting on computer aided ship surface design, was arguably the first to examine the use of B-spline curves for ship design. For many, B-splines, rational B-splines, and NURBS have been a bit mysterious.

When opportunity knocked, Joe Tiller busted the door down. Tiller became a major college head football coach somewhat late in his career. He was hired as the head coach at Wyoming just 12 days af-

ter his 48th birthday and became the head coach at Purdue two weeks before his 54th birthday. A disciple of the wide-open offenses used in the former Western Athletic Conference, Tiller's Wyoming teams enjoyed great success in what he fondly refers to as the "Wacky WAC." After leaving the Cowboys for Purdue, some coaches insisted that his one-back, spread offense wouldn't fly in the Big Ten Conference, with its physical, smash-mouth style of play. Instead, Tiller's fast-breaking offense, now nicknamed "basketball on grass," took the Big Ten by storm. Before Tiller came aboard, Purdue had endured 12-consecutive losing seasons. But under Tiller, the Boilermakers have enjoyed arguably their most successful winning stretch ever. Tiller's first eight teams went to bowl games, including the Rose Bowl. Before becoming a head coach, Tiller had served as an assistant at Montana State (his alma mater), Washington State, Purdue and Wyoming. He also spent nine years in Canada with Calgary of the CFL as an assistant coach, interim head coach, and in the front office where he was responsible for booking rock star Alice Cooper and evangelist Billy Graham for appearances at McMahon Stadium, home of the Stampeders. In many ways, Tiller is a typical who has spent most of his life in the conservative Midwest and the open spaces of the western United States. A regular Joe, Tiller's laid-back style, wry sense of humor and, of course, winning ways has made him a hit with Purdue players and fans alike.

The *Encircling Trilogy* comes thundering to a close as the man at the center is revealed The final book in Carl Frode Tiller's groundbreaking *Encircling Trilogy* is here. In Barbara Haveland's powerful translation, two new letters circle closer than ever to David, who allegedly lost his memory. One is from Marius, who has led the life of wealth and privilege that David was meant to live. And yet Marius does not appreciate it—desperate for attention, he lies to his girlfriend, with disastrous consequences. The other comes from Susanne, an ex-lover whose affair with David led to the breakup of her marriage. Humiliated by David's unflattering portrayal of her in his novel, Susanne is determined to exact revenge on him in the most painful possible way. Last of all we come face-to-face with David himself: a frustrated writer whose early successes have faded. His therapy sessions seem to reveal a dangerous and violent individual bent on getting what he wants at any cost. With David's own story told, the last piece falls into place, and his true character is unveiled. But as with books one and two, there are twists and turns that upset expectations and leave the reader wondering whom to believe. Across three books, Tiller's incisive character portraits lay bare the inequalities of class and excesses of wealth in Norwegian society. With *Encircling 3: Aftermath*, Tiller sounds the unexplored depths of David's life, in the culmination of this astonishing feat of psychological realism. In this second adventure of Tiller and Turnbuckle, Grandpa Dachshund tells his seven grand puppies the story of how Tiller, a dachshund who loves to sail, and Turnbuckle, the calico cat who loves adventure, rescue a dog from the sea during a storm as they sail away from St. Simons Island. Before the dog passes out, he mutters, "...must...find...ship...Jamaica. Then his paw opens, and a glass eye falls onto the deck. Tiller and Turnbuckle change course for Jamaica on a quest to find the ship. But Tiller, Turnbuckle, and the dog are captured by pirates. A chase begins across the Bahama Islands with swordfights, amazing escapes, and daring rescues. Join Tiller and Turnbuckle, and their many animal friends, in this tale of mutiny and buried treasure.

Tiller is set in upcountry South Carolina in the year 2008. Its chief character, who has just turned sixty, is doing what he can to maintain a sane life in and for his farm community in a time that is seriously out of joint. After the tragic loss of his wife two decades ago, Chauncey still lives alone on his family farm, but has slowly rejoined the world. It is his ties to the land and the members of his community that aid in the healing process. Tiller details this coming back to normalcy through his primary friendships with Kildee and Bess Henderson, Clint Blair (his dead wife's brother) and Trig Tinsley, a childhood friend who has had his own problems. These are characters met in Kibler's three previous novels set in this same community: *Memory's Keep* (which takes place in 1975), *Walking Toward Home* (set in 2003), and *The Education of Chauncey Doolittle* (set the year before in 2007). A new character, Dana Oxner, now divorced, returns home from corporate life in Charlotte seeking normalcy as well. Both she and Chauncey have scars that still need healing and together find solace in one another. In many ways the novel inverts the plot of Thomas Hardy's famous tragic novel, *The Return of the Native*. Tiller can be read alone, but achieves richness and complexity from its three predecessors. It thus forms the cap and final volume of a full tetralogy. Few such literary accomplishments are to be found in modern literature.

The brilliant first novel in the *Encircling Trilogy*, a searing psychological portrait of a man by his friends David has lost his memory. When a newspaper ad asks his friends and family to share their memories of him, three respond: Jon, his closest friend; Silje, his teenage girlfriend; and Arvid, his estranged stepfather. Their letters reveal David's early life in the small town of Namsos, full of teenage rebellion, the uncertainties of first love, and intense experiments in art and music. As the narrative circles ever closer to David, the letters interweave with scenes from the present day, and it becomes less and less clear what to believe. Jon's and Silje's adult lives have run aground on thwarted ambition and failed intimacy, and Arvid has had a lonely struggle with cancer. Each has suspect motives for writing, and soon a contradictory picture of David emerges. Whose remembrance of him is right? Or do they all hold some fragment of the truth? Carl Frode Tiller's masterful opening novel to the *Encircling Trilogy* won the European Prize for Literature, the English PEN Award, and the Hunger Prize. *Encircling*, with David as its brooding central enigma, confronts the relativity of memory in an audacious and daring novel that reveals the shape of a life and leaves us wanting more.

What is the connection between ancient Greek culture, folk lore, history and the long-suffering Greek citizen of today? The poet, a respected lawyer in the troubled EU state of Greece, opens a window for the reader into his inner world. He unfolds his ethics and aesthetics by exploring variations

on three themes: a) insights into moments that seem to be "frozen" in history; b) the musings of this modern-day philosopher; and c) the folk songs, history and lore of the poet's native Epirus. Poignant and evocative, this poetry (original Greek text by Augerinos Andreou, English transl. by Connie Stamos) reflects life in the countryside as well as urban living: the rich tapestry that makes up Greece today. Ebook; English text only; includes poet's prologue and introductory notes by the translator.

The global health and fitness industry is worth an estimated \$4 trillion. We spend \$90 billion each year on health club memberships and \$100 billion each year on dietary supplements. In such an industrial climate, lax regulations on the products we are sold (supplements, fad-diets, training programs, gadgets, and garments) result in marketing campaigns underpinned by strong claims and weak evidence. Moreover, our critical faculties are ill-suited to a culture characterized by fake news, social media, misinformation, and bad science. We have become walking, talking prey to 21st-Century Snake Oil salesmen. In *The Skeptic's Guide to Sports Science*, Nicholas B. Tiller confronts the claims behind the products and the evidence behind the claims. The author discusses what might be wrong with the sales pitch, the glossy magazine advert, and the celebrity endorsements that our heuristically-wired brains find so innately attractive. Tiller also explores the appeal of the one quick fix, the fallacious arguments that are a mainstay of product advertising, and the critical steps we must take in retraining our minds to navigate the pitfalls of the modern consumerist culture. This informative and accessible volume pulls no punches in scrutinizing the plausibility of, and evidence for, the most popular sports products and practices on the market. Readers are encouraged to confront their conceptualizations of the industry and, by the book's end, they will have acquired the skills necessary to independently judge the effectiveness of sports-related products. This treatise on the commercialization of science in sport and exercise is a must-read for exercisers, athletes, students, and practitioners who hope to retain their intellectual integrity in a lucrative health and fitness industry that is spiraling out-of-control.

They call him Wild Cat. I knew him before he was the sinfully gorgeous FMX rider with infinite hate in his blood. I knew him back when he was a shy little boy hoping a girl would love him back. That guy, he's nowhere to be found inside the devil known as Tiller Sawyer. Truth is, I didn't know who he really was... the crazy, sadistic, angry, introvert who uses drugs and alcohol to mask his own demons. Everyone warned me about Tiller. They told me he was cold and ruthless and screwed up. They told me he'd destroy me if I went to him for help. Alone and desperate, I was left with no other choice. Maybe I should have listened, but I didn't. Now I'm in too deep, and he doesn't know how to stop. And the only thing I'm certain of is I'll never be enough for someone like Tiller. It wasn't enough he took my heart when we were five. Now, he wants to destroy me completely.

Little Toby Tiller is feeling small and unimportant. He watches the great big machine on farmer Jesse's land move lots of dirt around to prepare for a new barn, and he wishes he could be like the big machine. When Teddy Pig sits next to him to watch the activity, he reminds Toby Tiller that he is very important to all of them on farmer Ezzie's farm because he does a job that the big machine can't do. Little Toby Tiller realizes that you don't have to be big to be important.

Experiments were conducted under controlled environments to investigate the influence of nutrient supply and panicle removal on tiller and panicle production in orchardgrass. Propagules of two clones, MID-5 (Clone 0), from the synthetic variety Pennlate, and Clone B, a locally adapted clone, were utilized for these studies. Tiller production was decreased when nitrogen or phosphorus deficient nutrient solutions were applied during the inductive and initiation period. Tiller production was primarily dependent on the nitrogen supply during the initiation period and, to a lesser extent, on the nitrogen level during the inductive period. Phosphorus supply appeared to be more important to tiller production during the inductive period than the initiation period. Potassium deficient nutrient solution did not appear to decrease tiller production during the inductive period, but reduced tiller production during the subsequent initiation period. The potassium level in the plant appeared to be sufficiently high to maintain vigorous growth during the inductive period. When nutrient solutions deficient in nitrogen or phosphorus were applied during the inductive period, none of the plants flowered unless high levels of the nutrients were supplied during the initiation period. When the nitrogen or phosphorus supply was high during the inductive period, deficiencies during the initiation period did not influence the number of panicles. Potassium supply during the inductive period did not significantly influence the number of panicles produced, but low potassium during the initiation period appeared to reduce panicle production. When plants were grown under low light energy during the initiation period, only tillers that had emerged during the inductive period became reproductive. When the light energy during the initiation period was high, over 85 percent of the panicles were produced from tillers that emerged during the initiation period. Tiller production in orchardgrass during the initiation period appeared to be a cyclic phenomenon with a lower percentage of tillers becoming reproductive with each cycle. When the panicles were removed, more tillers became reproductive after the first cycle compared to plants in which the panicles were not removed. Tiller production in the second cycle was greatest if the panicles were removed. Panicle removal did not increase dry matter production of the plants.

Poetry. TILLER NORTH takes us behind the walls of a fishing village in coastal Maine. With her insider's voice, Rosa Lane breaks the code of silence in her telling: secrets embedded within class, sexual identity, familial relationships, death, and rebirth. "I once said I would not look back," Lane tells us to-

ward the end of TILLER NORTH, but how grateful we are that she has, opening a world for us where she learned to listen not just for the cry of the loon, but also the rhythms of boats in water, bamboo flutes, the "rusty jaw" of the mailbox, June bugs that "bomb / the porch light with spiny legs," and all the sounds that accompany Maine's harsh winters and lush summers. But we don't just hear this world: Lane makes us see it, with one stunning image after another. From the ghost of a horse in a collapsed barn to her father who "stitches the backyard" when he returns from death as a hummingbird, the poems are so richly observed that by the end, all we want is to look back, again and again.

This spellbinding novel narrates the many-layered recollections of a hallucinating man in devastated Beirut. The desolate, almost surreal, urban landscape is enriched by the unfolding of the family saga of Niqula Mitri and his beloved Shamsa, the Kurdish maid. Mitri reminisces about his Egyptian mother and his father who came back to settle in Beirut after a long stay in Egypt. Both Mitri and his father are textile merchants and see the world through the code of cloth, from the intimacy of linen, velvet, and silk to the most impersonal of synthetics. Shamsa in turn relates her story, the myriad adventures of her parents and grandparents who moved from Iraqi Kurdistan to Beirut. Haunting scenes of pastoral Kurds are juxtaposed against the sedentary decadence of metropolitan residents. Barakat weaves into her sophisticated narrative shreds of scientific discourse about herbal plants and textile crafts, customs and manners of Arabs, Armenians, and Kurds, mythological figures from ancient Greece, Mesopotamia, Phoenicia, and Arabia, the theosophy of the African Dogons and the medieval Byzantines, and historical accounts of the Crusades in the Holy Land and the silk route to China.

The National Fire Protection Association (NFPA) and the International Association of Fire Chiefs (IAFC) are pleased to bring you Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply, Third Edition. This third edition of Fire Apparatus Driver/Operator has been thoroughly updated to serve as a complete training solution that addresses pump operation, safe driving techniques, tiller and aerial apparatus operation, and water supply considerations. From basic apparatus maintenance to fire pump theory and advanced hydraulic calculations, this single manual covers everything a fire service driver/operator needs to know. Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply, Third Edition meets and exceeds the job performance requirements (JPRs) of Chapters 4, 5, 6, 7, and 10 of the 2017 Edition of NFPA 1002, Fire Apparatus Driver/Operator Professional Qualifications. In the 2017 edition, the requirement that a Driver/Operator be certified to the Fire Fighter I level was removed. However, JPRs from NFPA 1001, Standard for Fire Fighter Professional Qualifications have been added so driver/operators who operate pumpers and mobile water supply apparatus are able to operate outside of the immediate dangers to life and health (IDLH) but still have an understanding of the following Fire Fighter I topics: Fire Department Communications (NFPA 1001: 5.2.1, 5.2.2, 5.2.3) The General Knowledge Requirements (NFPA 1001: 5.1.1) Responding on an Apparatus to an Emergency Scene (NFPA 1001: 5.3.2) Connect a Fire Department Pumper to a Water Supply (NFPA 1001: 5.3.15) Additional appendices include the excerpt of NFPA 1002 and corresponding correlation matrixes to substantiate all JPRs that are covered and documented. Comprehensive and updated content in this edition includes: Nozzle reaction and how to calculate it Expanded coverage of pump anatomy and pressure control devices Content that addresses vital parts of NFPA 1901, Standard for Automotive Fire Apparatus and NFPA 1911, Standard for the Inspection, Maintenance, Testing, and Retirement of In-Service Automotive Fire Apparatus. Appendix A: Daily/Weekly Inspection Check Sheet, that provides a comprehensive overview on what to inspect and how to ensure your apparatus is at operational readiness.
