This volume offers a meta-philosophical reflection on feminist philosophies of science. It emphasizes and discusses both the connections and differences between "traditional" philosophies of science and feminist philosophies of science. The collection systematically analyses feminist contributions to the various philosophies of specific sciences. Each chapter is devoted to a specific area of philosophy of science: general philosophy of science, philosophy of biology, philosophy of climate sciences, philosophy of cognitive sciences and neurosciences, philosophy of economics,

philosophy of history and archaeology, philosophy of logic and mathematics, philosophy of medicine, philosophy of psychology, philosophy of physics, and philosophy of social sciences. Since some of these areas have so far rarely been addressed by feminist philosophers, this new collection provides new angels and stimulates the debate on pivotal issues that are part and parcel of both "traditional" philosophies of science and feminist philosophies of science. Using a range of different methodologies and styles, the essays all show great clarity in both arguments and contents.

Fiction criticism has a long and influential history in pre-modern China, where critics would read and reread certain novels with a concentration and fervor far exceeding that which most Western critics give to individual works. This volume, a source book for the study of traditional Chinese fiction criticism from the late sixteenth to the early twentieth centuries, presents translations of writings taken from the commentary editions of six of the most

important novels of pre-modern China. These translations consist mainly of tu-fa, or "how-to-read" essays, which demonstrate sensitivity and depth of analysis both in the treatment of general problems concerning the reading of any work of fiction and in more focused discussions of particular compositional details in individual novels. The translations were produced by pioneers in the study of this form of fiction criticism in the West: Shuen-fu Lin, Andrew H. Plaks, David T. Roy, John C. Y. Wang, and Anthony C. Yu. Four introductory essays by Andrew H. Plaks and the editor address the historical background for this type of criticism, its early development, its formal features, recurrent terminology, and major interpretive strategies. A goal of this volume is to aid in the rediscovery of this traditional Chinese poetics of fiction and help eliminate some of the distortions encountered in the past by the imposition of Western theories of fiction on Chinese novels. Originally published in 1990. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

The Guide to the Presidency is an extensive study of the most important office of the U.S. political system. Its two volumes describe the history, workings and people involved in this office from Washington to Clinton. The thirty-seven chapters of the Guide, arranged into seven distinct subject areas (ranging from

the origins of the office to the powers of the presidency to selection and removal) cover every aspect of the presidency. Initially dealing with the constitutional evolution of the presidency and its development, the book goes on to expand on the history of the office, how the presidency operates alongside the numerous departments and agents of the federal bureaucracy, and how the selection procedure works in ordinary and special circumstances. Of special interest to the reader will be the illustrated biographies of every president from Washington to the present day, and the detailed overview of the vice-presidents and first ladies of each particular office. Also included are two special appendices, one of which gathers together important addresses and speeches from the Declaration of Independence to Clinton's Inaugural Address, and another which provides results from elections and polls and statistics from each office.

In this second part of Power Supply Systems in Communications Engineering, the choice of material and manner of presentation are based on knowledge and experience gained in the context of training programmes. The book presents a review of systems incorporating thyristor and transistor controlled converters, as developed by manufacturers and applied by users; and it explains circuit techniques and relationships with the aid of numerous illustrations. Other subjects covered include battery application, and earthing and protection techniques.

The second edition of this well received handbook provides a comprehensive overview and annotated commentary of those areas of international law most relevant to the planning and conduct of military operations. It covers a wide scope of military operations, ranging from operations conducted under UN Security Council mandate to (collective) self-defence and consensual and humanitarian operations and identifies the relevant legal bases and applicable legal regimes governing the application of force and treatment of persons during such operations. It also devotes attention to the law governing the status of forces, military use of the sea and airspace and questions of international (criminal) responsibility for breaches of international law. New developments such as cyber warfare and controversial aspects of law in relation to contemporary operations, such as targeted killing of specific individuals are discussed and analysed, alongside recent developments in more traditional types of operations, such as peacekeeping and naval operations. The book is aimed at policy officials, commanders and their (military) legal advisors who are involved with the planning and conduct of any type of military operation and is intended to complement national and international policy and legal guidelines and assist in identifying and applying the law to ensure legitimacy and contribute to mission accomplishment. It likewise fulfils a need in pertinent international organizations, such as the UN, NATO, Regional Organizations, and NGOs. It also serves as a comprehensive work of reference to academics and is suitable for courses at military staff colleges, academies and universities, which devote attention to one or more aspects of international law treated in the book. This mix of intended users is

reflected in the contributors who include senior (former) policy officials and (military) legal advisors, alongside academics engaged in teaching and research in these areas of international law.

In this volume more than 40 leading economists critically evaluate the work of Geoff Harcourt. Contributors include Tony Atkinson, Tony Lawson, Edward Nell and Ian Steedman.
